## 5 Biggest Changes in the New Revision: Some of the Key Updates in ISO 9001:2015

*The standards were revised with the changing business landscape in mind.*

### What's different?

- 1 New terminology**  
The change in terminology simply provides a less prescriptive standard.
- 2 Restructuring**  
ISO High Level Structure (HLS) is incorporated, which includes identical structure, text, and common terms and definitions for management system standards.
- 3 Emphasis on risk-based thinking to enhance the application of the process approach**  
Addressing risks means proactively managing uncertainties.
- 4 Improved applicability for services**  
An organization can determine that a requirement does not apply if it does not affect the organization's ability to ensure that a product or service conforms to requirements.
- 5 Increased leadership requirements**  
Top management's most basic role is strategic decision making for the organization.
